

The **DRAW ALIGNER PRO** is perfect for pulling out large dents. Its powerful hydraulic system provides up to **1.2 metric tons** of effortless traction. Fully adjustable and easy to move, this innovative device can be used for straightening out a car's underbody, wings and quarter panel.

## INDUSTRY-LEVEL INNOVATION

- Its hydraulic system offers a maximum pulling force of 1.2 metric tons
- No effort required, its hydraulic pump works like a conventional hydraulic jack
- The pulling arm can be tilted back and its height is adjustable meaning it can pull in any direction
- Its under-wheel support plate makes it possible to pull out dents from the vehicle's rear
- Its lateral support arm and its anti-roll bar guarantee stability
- Its simple set up allows for quick and efficient dent pulling
- Mobile and lightweight, it can be easily moved around the workshop.

## INCLINED DENT PULLING

The vertical pull bar can be tilted to the left and right, this allows the pulling direction to be adjusted +/- 45°.

The under-wheel chock means even quarter-panel damage can be pulled out.

## ACCESSORIES (INCLUDED)

### Under-wheel chock

### Under-body chock

### Sill-panel arm kit and anti-roll bar

## OPTIONS (NOT INCLUDED)

### Under-body pad kit 071278
