

The 4 x 10 A Multicharge Station is the ideal solution when you need to save time and space, without neglecting the health of your batteries. Designed to charge up to 4 batteries at the same time, it has two lead-acid charging curves: Standard / AGM and Gel, and a dedicated curve for charging Lithium (LiFePO4). Each output is totally independent, and capable of delivering up to 10 A for optimised charging, at either 6 V or 12 V.

## SIMULTANEOUSLY CHARGE 4 DIFFERENT BATTERIES

With 4 independent 10 A outputs, the Multicharge Station can charge up to 4 different batteries at the same time:

- Recharges all types of lead-acid batteries: standard / AGM / Gel, voltage 6 / 12 V, and capacity between 8 and 250 Ah.
- Recharges Lithium LiFePO4 batteries, voltage 6/12 V, and capacity between 8 and 250 Ah.

Removable 1.5 m cables

## 100% AUTOMATIC CHARGING CURVE

The 4 x 10 A - Pb/Li multicharge station is controlled by a microprocessor that combines efficiency and safety. Its intelligent, automatic charging curve maximises battery life and performance.

**Repair mode:** recovers deeply discharged and sulphated lead acid batteries.

## SAFE & ERGONOMIC

- **Protects the on-board electronics of the vehicle:** protection against short-circuits and reverse polarity.
- Robust, durable casing to deal with heavy-duty environments.
- **Intuitive interface:** each output has a digital display showing the charge level and progress of the charging process in real time.
- **Easy to move:** with two ergonomic handles for quick and easy transport.

Digital display for each output

	50 / 60 Hz	Icharge	V	Charge	Charging curve	kg	mm	kg	mm	SOS recovery	IP	1.5 m	1.5 m
